A Campus Program for Haven for Hope

Haven for Hope San Antonio, Texas

Facility Programming and Consulting was asked to complete a campus program for Haven for Hope, a new transformation center engaging the homeless population in San Antonio, Texas. Along with providing food, shelter and clothing, Haven for Hope will address the root causes of homelessness by centralizing an array of service in one location. Funded through a joint partnership between the City, County and private donations, Haven for Hope will set a new standard for addressing homelessness in the San Antonio community. Several workshops were held to reconcile, analyze and synthesize the information collected to create a cohesive, working campus that will become the benchmark to address homelessness across the nation.

The Child Care, After School Care and Education areas on the Haven for Hope Campus will exceed the minimum space standards established by the “Minimum Standard Rules for Licensed Child Care Centers – September 2006” and the “Head Start Center Design Guide – April 2000” to better serve and accommodate the needs of the member’s of Haven for Hope.
